Classes and Data Abstraction II: constructor usage in class

Implement a **product** class. The class should allow construction of Products with only a name; with a name and price; and with a name, price and shelf life in days. A Product also has a manufacturer; a description; flags to signal whether the product is fragile or edible; and an availability date, which indicates when the product will first be available for consumer purchase. The class interface should include methods to access the implementation.
