Introduction and Motivation

Discrete Uniform Distribution

Binomial and Multinomial Distribution Hypergeometric Distribution

• **Discrete Uniform Distribution:** If the random variable *X* assumes the values  $x_1, x_2, ..., x_n$ , with equal probabilities, then the discrete uniform distribution (probability mass function) is given by

$$f(x; k) = \frac{1}{k}, x = x_1, x_2, \dots x_k$$

Some Discrete Probability Distributions I

Dr. Cem Özdoğan

Some Discrete Probability Distributions

Introduction and Motivation

Discrete Uniform Distribution

Binomial and Multinomial Distribution

• **Discrete Uniform Distribution:** If the random variable *X* assumes the values  $x_1, x_2, ..., x_n$ , with equal probabilities, then the discrete uniform distribution (probability mass function) is given by

$$f(\boldsymbol{x};\boldsymbol{k})=\frac{1}{\boldsymbol{k}},\ \boldsymbol{x}=\boldsymbol{x}_1,\boldsymbol{x}_2,\ldots,\boldsymbol{x}_k$$

• **Example 5.1**: When a light bulb is selected at random from a box that contains a 40-watt bulb, a 60-watt bulb, a 75-watt bulb, and a 100-watt bulb, each element of the sample space  $S = \{40, 60, 75, 100\}$  occurs with probability 1/4.

Dr. Cem Özdoğan

Some Discrete Probability Distributions

Introduction and Motivation

Discrete Uniform Distribution

• **Discrete Uniform Distribution:** If the random variable *X* assumes the values  $x_1, x_2, ..., x_n$ , with equal probabilities, then the discrete uniform distribution (probability mass function) is given by

$$f(x; k) = \frac{1}{k}, \ x = x_1, x_2, \dots x_k$$

- **Example 5.1**: When a light bulb is selected at random from a box that contains a 40-watt bulb, a 60-watt bulb, a 75-watt bulb, and a 100-watt bulb, each element of the sample space  $S = \{40, 60, 75, 100\}$  occurs with probability 1/4.
- Therefore, we have a uniform distribution, with

$$f(x; 4) = \frac{1}{4}, \ x = 40, 60, 75, 100$$

Some Discrete Probability Distributions I

Dr. Cem Özdoğan

Some Discrete Probability Distributions

Introduction and Motivation

Discrete Uniform Distribution

• **Discrete Uniform Distribution:** If the random variable *X* assumes the values  $x_1, x_2, ..., x_n$ , with equal probabilities, then the discrete uniform distribution (probability mass function) is given by

$$f(x; k) = \frac{1}{k}, \ x = x_1, x_2, \dots x_k$$

- **Example 5.1**: When a light bulb is selected at random from a box that contains a 40-watt bulb, a 60-watt bulb, a 75-watt bulb, and a 100-watt bulb, each element of the sample space  $S = \{40, 60, 75, 100\}$  occurs with probability 1/4.
- · Therefore, we have a uniform distribution, with

$$f(x; 4) = \frac{1}{4}, \ x = 40, 60, 75, 100$$

• Example 5.2: When a die is tossed, each element of the sample space  $S = \{1, 2, 3, 4, 5, 6\}$  occurs with probability 1/6.

**Figure:** Histogram for the tossing of a die.

• Theorem 5.1::

The mean and variance of the discrete uniform distribution f(x; k) are

$$E(X) = \mu = \frac{1}{k} \sum_{i=1}^{k} x_i, \ \ \sigma_x^2 = \frac{1}{k} \sum_{i=1}^{k} (x_i - \mu)^2$$

• Example 5.3: Referring to Example 5.2 (tossing a die), we find that

$$\mu = 3.5, \sigma^2 = 2.92$$

#### Some Discrete Probability Distributions I

Dr. Cem Özdoğan

Some Discrete Probability Distributions Introduction and Motivation Discrete Uniform Distribution

• Bernoulli Random Variable: Suppose that we have a random variable X that has just two outcomes (e.g., success/failure) with probability p and 1 - p = q, respectively.

Some Discrete Probability Distributions I

Dr. Cem Özdoğan

Some Discrete Probability Distributions

Introduction and Motivation

Discrete Uniform Distribution

Binomial and Multinomial Distribution

- Bernoulli Random Variable: Suppose that we have a random variable X that has just two outcomes (e.g., success/failure) with probability p and 1 p = q, respectively.
- We call the random variable Bernoulli random variable. By representing a random variable *X* to be the number of successes,

 $X = \begin{cases} 1, \text{ with probability } p, \\ 0, \text{ with probability } 1 - p, \end{cases}$ 

Some Discrete Probability Distributions I

• **Example**: Suppose a professional basket player tries 5 free throws. The player is known to make 80% successful rate.

Some Discrete Probability Distributions I

Dr. Cem Özdoğan

Some Discrete Probability Distributions

Introduction and Motivation

Discrete Uniform Distribution

Binomial and Multinomial Distribution

- **Example**: Suppose a professional basket player tries 5 free throws. The player is known to make 80% successful rate.
- Let X be the number of free throws he will make, then  $X \sim b(n = 5, p = 0.8)$ .

**Table:** Possible cases of 4 successes (o) and 1 miss (x) among 5 trials with p = 0.8, q = 0.2.

Trial	Possible Event	<i>p</i> ( <i>x</i> )	Probability
1	0000X	ppppq	$(0.8)^4(0.2)^1 = 0.08192$
2	000X0	pppqp	$(0.8)^4(0.2)^1 = 0.08192$
3	00X00	ppqpp	$(0.8)^4(0.2)^1 = 0.08192$
4	0X000	pqppp	$(0.8)^4(0.2)^1 = 0.08192$
5	X0000	qpppp	$(0.8)^4 (0.2)^1 = 0.08192$

Since there are  $\begin{pmatrix} 5 \\ 4 \end{pmatrix} = 5$  cases of making 4 successes among 5 trials,

 $P(X = 4) = 5(0.8)^4(0.2)^1 = 0.4096.$

Introduction and Motivation

Discrete Uniform Distribution

Binomial and Multinomial Distribution

- **Example 5.9**: Consider the situation of Example 5.8. The "30% are impure" is merely a conjecture put forth by the area water board.
- Suppose 10 wells are randomly selected and 6 are found to contain the impurity. What does this imply about the conjecture? Use a probability statement.
- Solution:

$$P(X=6) = \sum_{x=0}^{6} b(x; 10, 0.3) - \sum_{x=0}^{5} b(x; 10, 0.3)$$

= 0.9894 - 0.9527 = 0.0367

For values of b(x; 10, 0.3), see Table A.1 from text book.

• As a result, it is unlikely (3.6%chance) that 6 wells would be found impure if only 30% of all are impure. This casts considerable doubt on the conjecture and suggests that the impurity problem is much more severe. Some Discrete Probability Distributions I

Discrete Uniform Distribution

Binomial and Multinomial Distribution

- Relationship to the Binomial Distribution. If *n* is small compared to *N*, the nature of the *N* items changes very little in each draw. (when  $\frac{n}{M} \le 0.05$ )
- $\mu = np = \frac{nk}{N}$  and  $\sigma^2 = npq = n * \frac{k}{N} * (1 \frac{k}{N})$ , where  $\frac{N-n}{n-1}$  is negligible when *n* is small relative to *N*.
- The binomial distribution may be viewed as a large population edition of the hypergeometric distributions.
- Example 5.15: A manufacture of automobile tires reports that among a shipment of 5000 sent to a local distributor, 1000 are slightly faulty.
- If one purchases 10 of these tires at random from the distributor, what is the probability that exactly 3 are faulty?
