

## Ceng 241 Lab Work 2

### **Classes and Data Abstraction I:** simple class implementation

Define a class named Customer that holds private fields for a customer ID number, last name, first name and credit limit. Include four public function that each set one of the four fields. Do not allow any credit limit over \$10,000. Include a public function that displays a Customer's data. Write a main() program in which you declare a Customer, set the Customer's fields and displays the results.
